

Bright example

Limit example

Massive / hot hosts ($T_{\text{eff}} \geq 10,000$ K)

Shows star-only ETC flux spectra; NIR is photometry (single point).

**A/F hosts (6,500–10,000 K)**

Shows star-only ETC flux spectra; NIR is photometry (single point).

**Quiet FGK hosts (5,200–6,500 K)**

Shows star-only ETC flux spectra; NIR is photometry (single point).

**K/M hosts ($T_{\text{eff}} < 5,200$ K)**

Shows star-only ETC flux spectra; NIR is photometry (single point).

Red dots: wavelength bins where $\pm 1\sigma$ shading is clipped for display.
