

Bright example

Limit example

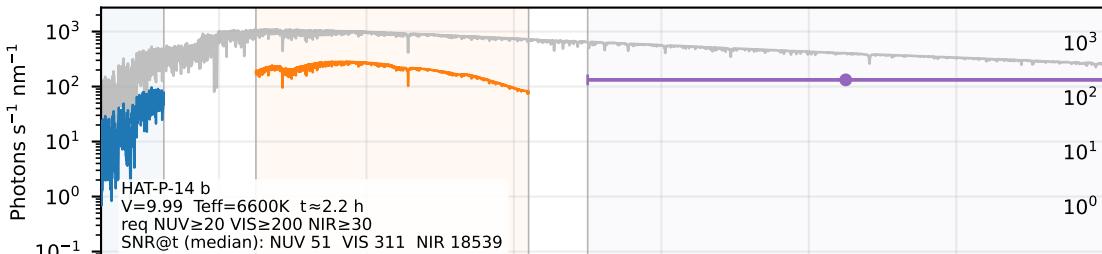

Massive / hot hosts (Teff \geq 10,000 K)

Shows star-only ETC flux spectra; NIR is photometry (single point).

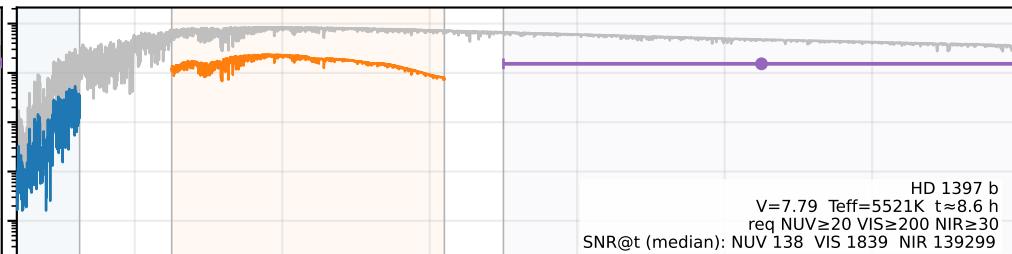

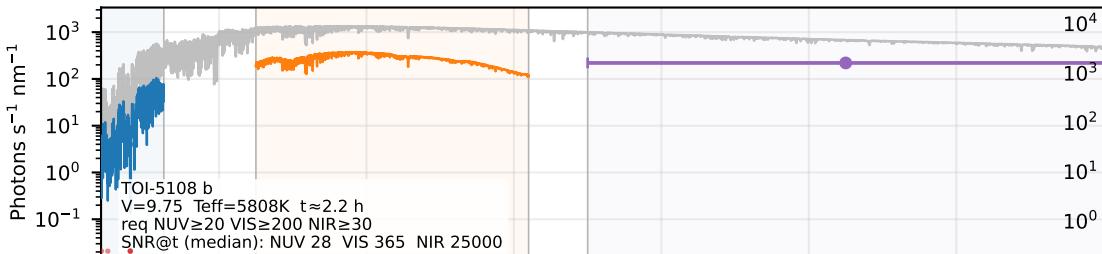

A/F hosts (6,500-10,000 K)

Shows star-only ETC flux spectra; NIR is photometry (single point).

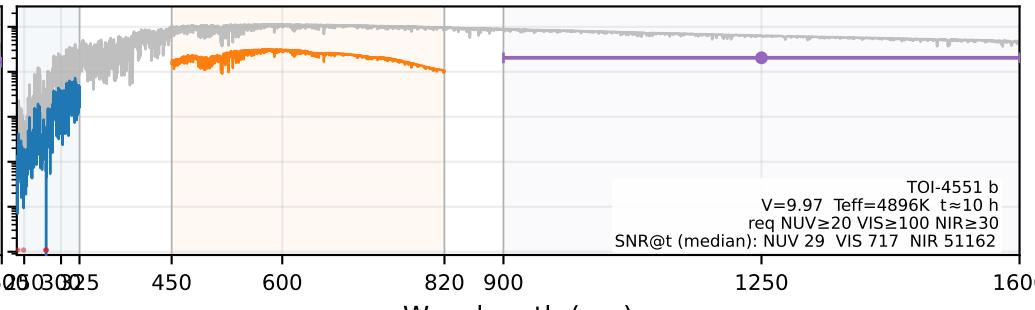

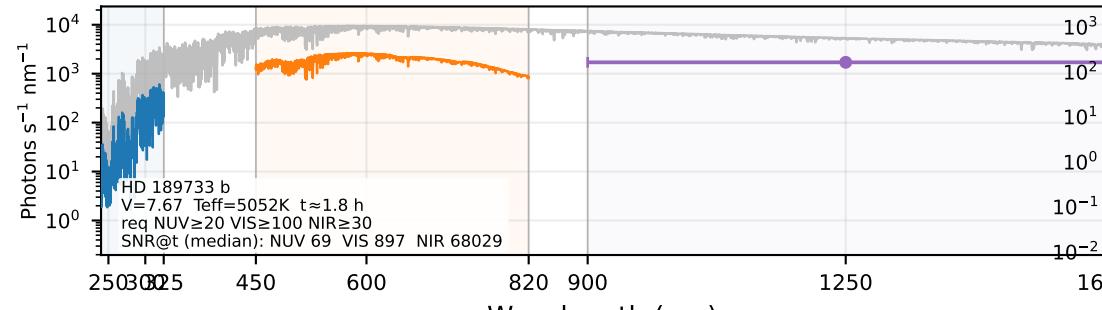

Quiet FGK hosts (5,200-6,500 K)

Shows star-only ETC flux spectra; NIR is photometry (single point).

K/M hosts (Teff < 5,200 K)

Shows star-only ETC flux spectra; NIR is photometry (single point).

Grey: full stellar SED at WALTzER-like resolution (normalized; includes detector gaps). Color: ETC bandpass data.

Red dots: wavelength bins where $\pm 1\sigma$ shading is clipped for display.
